IMOS F816 Contour Tape

Contour marking

Advantages:

- Particularly easy to apply
- Initial adherence still allows corrections
- Remains watertight even if damaged
- Exceptional long durability through acrylic upper layer
- 50 m rolls, 50.8 mm wide

IMOS

F816 Contour Tape

IMOS contour tape comes in two designs. For rigid side vehicles use rolls of continuous tape. On curtain side vehicles and tarpaulins apply the segmental tape. Such segmented tape is easy to process as segments are joined to each other through clear base material.

Please note the marking requirements set forth in the UN/ECE regulations:

- The complete contour of the vehicle's rear must be provided with red or yellow marking.
- Side contours have to be white or yellow.
- Partial contour markings are also permitted if at least 80 % of the vehicle's total length are marked.

The IMOS F816 contour tape complies with the requirements set for the properties of reflecting contour markings in standard sheet ECE 104, Class C.

The IMOS F816 contour tape is available in 50.8 mm wide, 50 m long rolls.

Advantages of IMOS contour tapes:

The contour tape is applied quickly and without any cutting wastes. Its adhesive slowly bonds to the substrate, thus allowing to modify the position of the reflecting tape at the beginning of the work.

Our reflective sheeting is watertight and shows very high reflectivity values. Neither water nor dirt can penetrate, even if the tape is cut or damaged. The acrylic upper layer confers the tape exceptional long durability.

Ordering numbers:

50 m rolls, 50.8 mm wide

For rigid side vehicles:

white	F816-50 W
yellow	F816-50 Y
red	F816-50 R

For curtain side vehicles:

white	F816-80 W
yellow	F816-80 Y
red	F816-80 R
